CAMILO VERGARA SALAS

Santiago, Chile (Open to Remote / Relocation) | +56 9 9751 3084 | camilovergarasalas.cvs@gmail.com | LinkedIn | Personal Website | GitHub

EDUCATION

Instituto Profesional IPG, Santiago, Chile — Mar 2026 - Dec 2028
B.Eng. in Data Science Engineering (Ingeniería en Ciencia de Datos · In Progress)

Instituto Profesional IPLACEX, Santiago, Chile — Mar 2026 - Dec 2027
Associate Degree in Data Analysis (Técnico de Nivel Superior en Análisis de Datos · In Progress)

Colegio Universitario IES, Córdoba, Argentina — Mar 2021 - Dec 2023
Systems Analysis Studies (3 Years Completed in Software Engineering & Relational Databases)

Relevant Courses & Certifications: Machine Learning, Statistical Modeling, Time-Series Forecasting, Relational & Dimensional Databases (SQL), Data Structures & Algorithms, Data Governance, Google Data Analytics Professional Certificate (2026), Google AI Fundamentals (2026), Supply Chain Management & Analytics (Coursera).

SKILLS

Programming & Software: Python (Pandas, NumPy, Scikit-learn, LightGBM, Prophet, SARIMAX, Matplotlib, Seaborn), SQL (PostgreSQL, MySQL, BigQuery), JavaScript, PHP, HTML/CSS, Git

Algorithms & Models: Time-Series Forecasting, Gradient Boosting (LightGBM), Logistic & Linear Regression, Classification, Anomaly Detection, Cohort Analysis, Walk-Forward Temporal Validation

Techniques & Data Engineering: ETL/ELT Pipelines, Dimensional Modeling (Star Schema), Stored Procedures & Triggers, Feature Engineering, Model Calibration & Temporal Drift Auditing (AUC/Brier), Wilson Confidence Intervals

Tools & Platforms: Power BI (DAX, Power Query, PBIP), Tableau Desktop/Public, dbt (21 QA tests), Advanced Excel (PivotTables, Power Query), Docker, DBeaver, Workflow Automation

PROFESSIONAL EXPERIENCE

Data, Business Intelligence & Software Consultant, Independent Practice (Freelance), Santiago, Chile — Jan 2026 - Present

- Delivered end-to-end operational and analytical modernization for a commercial retail business, designing daily gross margin, inventory turnover, SKU replenishment, and waste-at-cost data models from scratch.
- Reduced stockouts to near zero, increased sales by 10–15%, and cut procurement costs by 15–20% by deploying daily SQL/Excel tracking, Power BI and Tableau dashboards, and an automated WhatsApp voice-to-data capture bot.
- Engineered independent analytics and forecasting solutions: star-schema dbt pipelines, recursive LightGBM models, and walk-forward validated moving-average baselines free of temporal data leakage.

Data Analyst / Analyst Programmer, Top Partners S.A. (SubContrataLey B2B SaaS), Santiago, Chile — Dec 2021 - Jan 2026

- Accelerated Law 20.123 labor-compliance report delivery by 40% by designing, optimizing, and automating SQL ETL pipelines (stored procedures, triggers, CTEs, and window functions) on PostgreSQL and MySQL.
- Architected and maintained interactive Power BI and Tableau dashboards over star-schema dimensional models with custom DAX measures, used daily by 70+ enterprise client companies and 100+ active users.
- Raised automated document verification accuracy above 90% by enforcing data governance rules and deploying Python anomaly-detection routines (Pandas, Seaborn), while leading the People Analytics (HR) reporting suite.

PROJECTS & PRODUCT ENGINEERING

Airmed & DatBase: Clinical Operations & Relational Data Platforms, (Product Engineering) — 2024 - 2026

- Airmed (Digital Health): engineered care-traceability modules, schedule utilization tracking, SLA compliance indicators, and executive Power BI (DAX) + SQL + Python workflows to standardize clinical and operational records.
- DatBase (Data & Workflow Platform): architected relational schemas in SQL/MySQL/PostgreSQL, automated stored procedures, data-integrity validation layers, and operational reporting modules using PHP, JavaScript, and Python.

End-to-End Retail Demand Forecasting & Replenishment Pipeline, (dbt + BigQuery + LightGBM + Tableau) — 2025 - 2026

- Built a star-schema pipeline with 21 passing dbt data-quality tests across 213,480 calendar rows (360 store-SKU series), clamping negative returns and completing sparse date spines with explicit zeros.
- Evaluated recursive LightGBM across 4 walk-forward origins without future price/promo leakage, achieving 30.28% beverage WMAPE vs. 44.89% seasonal-naive baseline and formulating shadow-pilot rules for intermittent demand.

Chronological Banking ML Drift Audit & Public Data Observatories, (SQL + Python + Power BI) — 2025 - 2026

- Audited 41,188 UCI bank-campaign records under a strict 60/20/20 chronological split excluding call-duration leakage; diagnosed ROC-AUC collapse to 0.458 caused by macroeconomic base-rate shift (4.8% to 30.8%), preventing a flawed deployment.
- Developed reproducible studies across CLP retail cohort waste (3,825 batches; CLP 2.98M olives loss), US BTS airline reliability (577,262 flights with Wilson intervals), and 49-year COCHILCO copper reconciliation (r = 0.923).
