EXECUTIVE SUMMARY

Data Analyst and Business Intelligence specialist with 4+ years of experience turning complex operational, clinical, and commercial datasets into measurable decisions. Proven track record across B2B SaaS compliance (Top Partners S.A. · 70+ enterprise clients), healthcare operations (Airmed), and freelance Data & BI consulting, combining advanced SQL (PostgreSQL, BigQuery), dimensional modeling (Star Schema, dbt), Python automation, and executive dashboards in Power BI (DAX) and Tableau. Pursuing an Associate Degree in Data Analysis at IPLACEX (2026–2027) and a B.Eng. in Data Science Engineering at IPG (2026–2028), distinguished by leakage-free temporal validation, data governance rigor, and decision-first analytical judgment.

PROFESSIONAL EXPERIENCE

Data Analyst & Business Intelligence Specialist · Airmed (Digital Health & Clinical Operations) *Healthcare & Operations Analytics*

- Modeled and automated clinical operations, scheduling utilization, service-level (SLA) compliance, and patient journey KPIs using advanced SQL queries (CTEs, window functions) and structured ETL workflows.
- Built executive and operational dashboards in Power BI (DAX, Power Query) and advanced Excel to track capacity utilization, service turnaround times, patient retention, and revenue performance.
- Implemented data quality controls and exploratory data analysis (EDA) routines in Python (Pandas) to surface operational bottlenecks and standardize data capture across clinical and administrative teams.

Freelance Data, Business Intelligence & Operations Consultant · Independent Consulting (Retail, Supply Chain & BI) *Jan 2026 – Present*

- Delivered an end-to-end operational and analytics modernization for a commercial retail business, defining daily gross margin, inventory turnover, waste-at-cost, and procurement KPIs from scratch.
- Reduced stockouts to near zero, drove a 10–15% sales increase, and lowered procurement costs by 15–20% by deploying daily tracking across SQL, advanced Excel, Power BI, Tableau, and an automated WhatsApp voice-to-data bot.
- Engineered and delivered independent BI and analytics solutions: demand forecasting & replenishment pipelines (dbt, LightGBM, walk-forward validated moving-average baselines), CLP cohort waste control, and temporal model audits.

Data Analyst / Analyst Programmer · Top Partners S.A. · SubContrataLey (B2B SaaS) *Dec 2021 – Jan 2026*

- Accelerated labor compliance report delivery (Law 20.123) by 40% by designing and automating PostgreSQL ETL pipelines using stored procedures, triggers, CTEs, and window functions.
- Architected interactive Power BI and Tableau dashboards on a star-schema dimensional model with custom DAX measures, used daily by 70+ enterprise clients and 100+ active users.
- Raised automated document verification accuracy above 90% by enforcing data governance rules and deploying Python anomaly-detection routines (Pandas, Seaborn) across daily document ingestion.
- Spearheaded People Analytics (HR): modeled employee tenure cohorts, attrition, absenteeism, headcount, and recruitment funnel metrics while automating ERP payroll consolidation with Power Query.

EDUCATION & PROFESSIONAL CERTIFICATIONS

B.Eng. in Data Science Engineering (Ingeniería en Ciencia de Datos) — Instituto Profesional IPG, Chile **2026 – 2028 · In progress**

Associate Degree in Data Analysis (Analista de Datos) — Instituto Profesional IPLACEX, Chile **2026 – 2027 · In progress**

Systems Analysis Studies (3 Years Completed) — Colegio Universitario IES, Córdoba, Argentina **2021 – 2023**

Professional Certifications: Google Data Analytics Professional Certificate (2026) · Google AI Fundamentals (2026) · Supply Chain Management & Analytics (Coursera) · Full Stack Web Developer Bootcamp (Soy Henry, 2021)

DELIVERED ANALYTICS & DATA SCIENCE PROJECTS

Demand Forecasting & Replenishment Pilot (SQL/dbt · BigQuery · LightGBM · Tableau)

- Engineered a star-schema pipeline with 21 passing dbt data-quality tests across 213,480 calendar rows (360 store-SKU series); benchmarked recursive LightGBM via walk-forward temporal validation (30.28% beverage WMAPE vs. 44.89% seasonal-naive baseline).

Retail Cohort Waste, BTS Airline Reliability & ML Drift Auditing (SQL · Python · Power BI)

- Built 5 additional reproducible studies across retail and official public datasets (3,825 CLP batches; 577,262 US BTS flights; 49-year COCHILCO copper series; 41,188 UCI bank records) with native Power BI (.pbip), Tableau (.twbx), and Excel (.xlsx) workbooks.

TECHNICAL SKILLS & BUSINESS DOMAINS

SQL & Data Engineering: Advanced SQL (CTEs, Window Functions, Stored Procedures, Triggers), PostgreSQL, Google BigQuery, dbt, Star Schema Modeling, ETL/ELT.

Business Intelligence: Power BI (DAX, Power Query, PBIP), Tableau Public/Desktop, Advanced Excel (Native PivotTables, Power Query, Operational & Cohort Modeling).

Python & Data Science: Python (Pandas, NumPy, scikit-learn, LightGBM, Prophet, SARIMAX, Matplotlib, Seaborn), Walk-Forward Temporal Validation, Model Drift Auditing.

Analytics Domains: Healthcare & Clinical Operations (Airmed), B2B Regulatory Compliance (Law 20.123), People Analytics (HR), Supply Chain & Inventory (ABC, Safety Stock).

Languages & Workflow: Spanish (Native) · English (B2 Functional Professional Proficiency) · Git/GitHub, Docker, DBeaver, Scrum, Process Automation.
